

FIRE SAFETY POLICY

The objective of the Fire Safety Policy (FSP) is the fire prevention, the articulation with firefighting entities, preservation of life, patrimony and environment, including Workers, Customers, Suppliers and the Community.

Lisnave considers the FSP an integral part of the sustainability and development of the Company that should articulate with all levels of activity of the organisation.

It complies with legislation and regulations in effect, in matters of FSP, and implements “good practices” and standards adapted to its activity.

It commits to disclose the self-protection measures that must be followed by everyone in the Company.

It promotes the implementation of self-protection measures of FSP encouraging all Company workers to look out for their own safety and that of third parties as well as to promote the adoption of measures leading to fire prevention and the reduction of their consequences and to ensure a safe and effective response in case of fire.

It provides the necessary financial and human resources for the maintenance of self-protection measures.

It promotes educational practices and provides the necessary means to share information, training actions, coaching, exercises and others involving all stakeholders, so that the self-protection measures achieve their objectives.

Considering that the success of this policy depends on everyone's commitment, it encourages the continuous improvement of the conditions of the FSP and the self-protection measures on work organisation, in procedures, operations, facilities, machinery and equipment and on prevention and changes management.
